

VIKAS V

AI & Machine Learning Engineer | Automation | Software Development

Phone: +91 8431288342 | Email: vikasv.ckm@gmail.com

LinkedIn: www.linkedin.com/in/vikas-v-aa50b7291 | GitHub: [Vikasv01](https://github.com/Vikasv01)

Professional Summary

Computer Science Engineering student with strong focus on **Artificial Intelligence and Machine Learning**, with hands-on experience in building intelligent systems and automation workflows. Developed real-world solutions using **ANN, SVM, YOLO, and Reinforcement Learning (DQN)**, including an AI-based irrigation optimization system trained over **100,000 iterations**. Built automation pipelines using **n8n and OpenAI APIs** for data processing and decision support. Published IEEE research in healthcare AI applying machine learning and computer vision techniques. Additionally experienced in applying cybersecurity fundamentals including network security, threat analysis, and frameworks such as **MITRE ATT&CK and Cyber Kill Chain**, with hands-on exposure to tools like **Kali Linux and Nmap**.

Research & Publication

IEEE Conference Paper – Early Diagnosis and Classification of Fetal Health and Brain Abnormality using Cardiotocography Dataset

Author

- Developed machine learning models using ANN, SVM, and YOLO for medical diagnosis
- Applied image processing techniques on clinical datasets for feature extraction
- Evaluated model performance for classification and detection tasks
- Demonstrated AI-driven healthcare system for early-stage diagnosis

Internship Experience

CYBERLANCERS

FEB 2026 – MAY 2026

AI Transformational Internship

- Working on AI-based applications involving machine learning and automation systems
- Developing data-driven models for real-world problem-solving scenarios
- Designing and implementing automation workflows using APIs and n8n
- Integrating AI models into practical systems for decision-making tasks
- Collaborating on project development, testing, and iterative improvements
- Exploring optimization techniques for improving model performance and system efficiency

CODTECH

Python Programming Intern

- Developed Python scripts for automation, data handling, and basic analytics
- Applied logical problem-solving techniques to build efficient solutions
- Worked with structured data and implemented reusable code modules
- Gained hands-on experience in debugging, testing, and optimizing Python programs

BHARATH INTERNS

Web Development Intern

- Built responsive frontend applications including Netflix clone and weather system
- Improved UI/UX and ensured cross-device compatibility
- Strengthened understanding of frontend architecture and component-based design

Projects

AI Irrigation Recommendation System

- Developed AI-based irrigation system to optimize water usage under varying conditions
- Built simulation environment using environmental parameters (soil moisture, temperature, humidity, rainfall)
- Implemented Reinforcement Learning using Gymnasium and DQN
- Trained the model over **100,000 iterations**, improving decision stability and policy learning
- Structured system for extensibility into fertilizer and yield prediction modules

AI Web Traffic Analyzer

- Developed AI system to analyse and monitor web traffic patterns and trends using n8n
- Built automation workflows using n8n for data collection, transformation, and routing
- Integrated OpenAI APIs for intelligent insights, anomaly detection, and summarization
- Designed reusable pipelines for continuous monitoring and analysis

n8n Automation Workflows

- Designed and implemented **3+ automation workflows** for real-time task execution
- Built event-driven pipelines using triggers, scheduling, and webhooks
- Automated API integrations and data routing across multiple services
- Improved workflow efficiency by reducing manual intervention

Fetal Health Diagnosis System (IEEE Project)

- Developed machine learning-based healthcare system for early diagnosis
- Applied ANN, SVM, and YOLO models for classification and detection
- Performed preprocessing and feature extraction on medical datasets
- Published IEEE research paper based on system performance

Web Development Projects

Full Stack Applications

Cafe Management System

- Designed and implemented a full-stack Cafe Management System with database integration for efficient order and user management

E-Learning Platform

- Built an E-Learning Platform with authentication, course management, and interactive user modules for seamless learning experience

Frontend Applications

Weather Forecast Web Application

- Developed a Weather Forecast Web Application with real-time API integration and dynamic user interface updates

Netflix Clone

- Built a responsive Netflix Clone replicating modern streaming platform UI with structured layouts and reusable components

Workshops

Web Development Workshop

- Learned HTML, CSS, and JavaScript fundamentals through hands-on implementation
- Developed **Cafe Management Web Application (Frontend Only)**
- Designed responsive UI and implemented interactive client-side functionality

Certification

- NPTEL – Big Data Analytics
- NPTEL – Java Programming
- Udemy – Java Programming Masterclass
- Celonis – Process Mining
- Zenith Adept – Coding in C++

Technical Skill

- **Languages/Frameworks:** C, C++, Java, Python, JavaScript, HTML, CSS, MySQL
- **Machine Learning & AI:** ANN, SVM, YOLO, Reinforcement Learning (DQN), PyTorch (basic)
- **Tools & Platforms:** n8n, OpenAI API, Prometheus
- **Cloud Platforms:** AWS, Microsoft Azure
- **Cybersecurity & Systems:** Kali Linux, Nmap, Linux CLI, File Permissions

Soft Skills

- Team Collaboration
- Problem Solving
- Analytical Thinking
- Communication
- Time Management

Education

Adichunchanagiri Institute of Technology

Dec. 2022 – Apr. 2026

Bachelor of Engineering in Computer Science

Vikas V
